

# LUMINESCE™

advanced night repair

Combining the expertise and technologies of renowned physicians, **LUMINESCE™ advanced night repair** works while you sleep—when cellular repair is most active—by enhancing the health of your skin's DNA. This powerful cosmeceutical is based on the most advanced clinical research available and is designed to enhance specific metabolic pathways involved in the aging process. **LUMINESCE™ advanced night repair** includes naturally derived ingredients that help repair your DNA on a cellular level and combat the appearance of premature aging.

During the normal aging process, your cells and the gel-like substance that lubricates between them lose hydration, causing your skin to become thin and dry. The growth of new skin cells slows down, creating a dull, sagging complexion, and telomeres, which protect your DNA from damage, become shortened. Nutrients necessary for skin regeneration and DNA repair cannot make their way inside the cells, and waste products cannot leave. Daily routines expose you to free radicals, which inhibit the growth of healthy cells and deplete the body's store of proteins and lipids.

**LUMINESCE™ advanced night repair** combines the latest in patented technology to correct the environmental damage of the past and fortify your skin for the future. It supports natural self-repair mechanisms during the night to reduce the signs of aging from the effects of harmful agents, leaving your skin renewed and revitalized. **LUMINESCE™ advanced night repair** provides maximum hydration, restores moisture, and diminishes the signs of time on your skin.

#### Benefits

- Studies show increased intracellular hydration by 85% in just two weeks and the reduced appearance of fine lines and wrinkles in as little as two hours
- Increases skin firmness and elasticity
- Contains powerful vitamins and antioxidants to help protect your cell membranes from free radical attack
- Absorbs quickly into your skin
- Contains 200+ key human growth factors that gently replenish your skin's natural levels of proteins like collagen and elastin
- Diminishes the appearance of age spots and evens your skin tone
- Helps delay the aging process by protecting, repairing, and regenerating your skin cells

Recapture the  
*youthful  
luminosity*  
of your skin
